Search You are here From the field: News is delivered to the field through email, live transmissions, and webinar. Now, there is a third way to receive field news: the broadcast channel. More and more organizations are turning to broadcast to deliver field-level news, enabling listeners to react immediately. This can be a life-saving advantage. In case of an emergency, you can tune in to the broadcast channel and monitor the emergency message, rather than trying to read messages on the web or listen to the news during commercials. Reach a wider audience and more listeners and viewers A broadcast channel can broadcast via internet, phone lines, TV and mobile phone networks. The audience can listen in on the radio channel at any time, without being bound to specific times or frequency. This opens up new possibilities for the organization. A reliable broadcast source enables a company to extend its reach to a wider audience, and to more people who might be interested in hearing the company's message. It also enables a larger audience to be included in the conversation. Give your customers what they want In today's world, the most important thing is to be listened to. Your organization might not be the best at covering the story. But what if you could listen to listeners and deliver messages tailored to them? As part of the expansion of broadcasting via the internet, TV and mobile phones, it's becoming easier to deliver this. You can make use of your broadcasting software to tailor your messages based on audience interests and location. You can use your website to increase the number of people who visit
