download desperados helldorado gratis full version download desperados helldorado gratis download free download desperados helldorado gratis download for pc download desperados helldorado gratis full version Fate of advanced and marginally resectable non-small cell lung cancer: implications for optimal therapy. There are few data that define the optimal treatment for advanced or marginally resectable non-small cell lung cancer. The majority of patients with advanced disease are best managed by sequential cisplatin-based chemotherapy. In an attempt to control the symptoms associated with disease progression, patients are frequently treated with radiation therapy. There are few data that define the optimal treatment for advanced or marginally resectable non-small cell lung cancer. The majority of patients with advanced disease are best managed by sequential cisplatin-based chemotherapy. In an attempt to control the symptoms associated with disease progression, patients are frequently treated with radiation therapy. Q: C# WinForms: "FileName" property of System.IO.StreamReader has no definition I have the following C# code: StreamReader streamReader; public Form1() { InitializeComponent(); streamReader = new StreamReader(@"C:\Test\test.txt"); // Show form } But the compiler reports the following error in the very line where I instantiate the StreamReader object: "The type or namespace name 'StreamReader' could not be found (are you missing a using directive or an assembly reference?)" I also tried using the "using System.IO;" directive to the top of the Form1.cs but that didn't fix it either. What am I missing here? A: As others have pointed out, StreamReader is a class, not a namespace. Add: using System.IO; (or whatever namespace your code is in) to the top of the form and it should work. A: You cannot access the "FileName" property from a StreamReader object because it is not a class, it is a namespace. Use this instead: StreamReader streamReader; using System.IO; public Form1() { InitializeComponent(); streamReader = new StreamReader(@"C:\Test\test.txt"); 2d92ce491b
